

Task-5:

Observe the diagram and try to answer the questions.

FACT-1: Snails are the slowest of all animals.

FACT-2: Snails have a hard outer shell.

Do you think there is a connection between the above two facts.

Suppose snails did not have the hard outer shell, what will happen to all the snails in a forest?

When an animal is hunting another animal which has ears, should it be very silent or noisy by snarling and growling?

When an animal is hunting another animal which has very good eyes, should it move very fast, medium fast or very slow?

When an animal is being hunted or finds out its predator is near, should it be very slow and silent in hiding or should it be very fast? Think about snails.
