

Activity-30: Identification of Plant parts.

Procedure:

Students should collect at least 5 different plants from the surroundings. Be very gentle in uprooting the plant from the soil. You should not tear the stem and root apart. If necessary dig the soil surrounding the plant and uproot it. Then thoroughly wash the plant. Try to observe the following parts as present in the table.

If you do not know the name of the plant, try describing it using the instruction-set for plant identification. Or you could also name the plant which is very similar to it.

Plant(y/n)	Plant-1	Plant-2	Plant-3	Plant-4	Plant-5	Plant-6
Root
